Art Unit: 2682 Page 5

REMARKS

Reconsideration of this application is respectfully requested in view of the foregoing amendment and the following remarks.

Claims 1-33 were pending in this application and have been canceled in favor of new claims 34-43. Support for the new claims can be found in the now-cancelled claims and, for example, in paragraphs [0021], [0032] and [0037] of the application. No new matter has been entered. For the reasons stated below, Applicants respectfully submit that all claims pending in this application are in condition for allowance.

In the Office Action, claims 1, 4 and 33 were objected to; claims 1-13, 23, 24 and 25-32 were rejected under 35 U.S.C. §112, second paragraph, as being indefinite; claim 1 was rejected under 35 U.S.C. §102(b) as being anticipated by Wyman (U.S. Patent 5,745,879); claims 1-6, 8-18, 20-26 and 28-33 were rejected under 35 U.S.C. §103(a) as being unpatentable over Coley et al. (U.S. Patent 5,790664) in view of Horstmann (U.S. Patent 6,009,401); and claims 7, 19 and 27 were rejected under 35 U.S.C. §103(a) as being unpatentable over Coley et al., Horstmann and further in view of Wyman. To the extent these objections and rejections might still be applied to claims presently pending in this application, they are respectfully traversed.

The original claims have been canceled in favor of new claims 34-43. Thus, the prior objections and rejections are now moot. Nonetheless, Applicants did take into consideration, in drafting the new claims, the formal issues raised in the Office Action.

As now claimed, the invention comprises a method by which software users are connected via a network to a trusted third party (such as a financial institution or, more

Serial No.: 10/059,251 Attorney's Docket No.: ABN0006-US

Art Unit: 2682

specifically, a bank). Software users request access to one or more software packages. The financial institution calculates a total "value" of the software being used at that time, based on, e.g., pre-negotiated usage costs for individual software packages and the number of users using the software packages. If the granting of still more access to a particular software package will cause a maximum allowable value of software usage to be exceeded, the <u>user is offered an alternative software package to use that will not cause a predetermined threshold ("a predetermined maximum permissible use value") to be exceeded, as recited in new claim 34.</u>

For example, a particular user might not need a full copy of a comprehensive computer aided drawing (CAD) software package, when, e.g., that user might only really need a "reader" software package for a CAD file. A "reader" software package might have a lower usage value than a corresponding comprehensive CAD software package. Accordingly, if the "reader" software package is used, the maximum permissible use value, considering all software being used at that time by different software users, might then not be exceeded. As a result, the "reader" software package might be offered as an alternative package.

In one possible implementation, the methodology of the present invention might calculate [(number of users of given software package)x(usage cost for that software package)] for each software package then being used to determine an overall use value. The methodology might then, in the context of receiving a request for use of a software package, offer an alternative software package to a user when the overall use value would exceed a predetermined maximum level if the user's original request were granted.

While the prior art relied upon in the Office Action discloses several methodologies for controlling the dissemination of software using some type of licensing scheme over a network, none of the cited prior art discloses the specific limitation of offering an alternative usage plan in response to a request for software access when that access would cause a predetermined maximum permissible use value to be exceeded, as now recited by new independent claim 34. That is, none of the cited prior art includes the concept of calculating "use values" based on the number of users of different software packages, as claimed. Since none of the cited prior art discloses or even suggests this specific feature of the present invention, Applicants respectfully

In view of the foregoing all of the claims in this case are believed to be in condition for allowance. Should the Examiner have any questions or determine that any further action is desirable to place this application in even better condition for issue, the Examiner is encouraged to telephone applicants' undersigned representative at the number listed below.

submit that the newly-presented claims should all be patentable over that prior art.
